Disaster Recovery TM Master V2.

Office database recovery. Can be achieved via backups taken of the fleet SQL database.

If this is not available, then a recovery can be performed via the TM Master software as an Administrator with the correct rights assigned.

Taking an export of the database from each vessel to be rebuild within the office environment.

If you are required to either Import or Export a Unit, you can do this within 'System > Import and Export'.

If you are required to take an export of a Unit - in the Export section, click the 'Export all v2z' button. Choose a filename and location for the file that will be created and click Save; TM will now export the selected unit to a v2z file in your chosen location. Once complete it will display 'The database has been exported' and show the path where it has been exported to.

Note: The v2z file that is created is essentially a zip folder containing XML files. You can rename a v2z file into a zip folder to explore the contents or extract specific XMLs. These exports do not include every table from the database, so some system settings such as TM Exchange settings will not be backed up this way.

		ℓ ₁ Import and export
Ship	×	Import_Export Database V2 update Replication Cache Portal Buffer TmAdmin Mobile
Inventory	*	Status Import new DB and
Movable Assets	×	database erase existing data.
Maintenance	*	unit import single clinit for clianty of overwriting existing data.
Crew	*	Import single xml file or v2z file with data.
Slop Chest & Accounting	*	
Voyage	¥	Export
Docking	×	Status Export all Export all Export all
Purchasing	×	Export all Export site complete database. v2z except the TmSystem table as v2z.
HSEQ	×	Export a unit data and common data. (Office only.)
Document Handling	×	Export unit Export
System's Place	×	spec only movable data
Tools	×	SQL Sql statement to run (be sure statement has correct syntax.) :
Administration	×	Sal->XML Save query results to xml file

Log		

Transfer the v2z file to the office environment.

The v2z that you need to import, click the button 'Import single unit' in the Import section. Navigate to the v2z file that you have saved and Open. It will now import the selected file and will display a popup window notifying you when the Import is complete.

Repeat the process from each of the vessels in the fleet to complete the rebuild of the office environment.

Note: Documents on each vessel can also be zipped and transferred and within the export process it is asked if you wish to zip the documents for transfer.

System settings and the replication will require manual setup.

Rebuild a vessel TM Master environment after a disaster.

The process is the same as the above.

If you are required to take an export of a Unit - in the Export section, click the 'Export a unit' button. You will now be presented with a list of units; select the Unit you want to export and click OK. Finally, choose a filename and location for the file that will be created and click Save; TM will now export the selected unit to a v2z file in your chosen location. Once complete it will display 'The database has been exported' and show the path where it has been exported to.
